## OSHA Lockout Standard

### OSHA 29 CFR 1910.147: THE CONTROL OF HAZARDOUS ENERGY (LOCKOUT/TAGOUT)

**1. Scope :** This standard covers the servicing and maintenance of machines and equipment in which the unexpected energization or start up of the machines or equipment, or release of stored energy could cause injury to employees. This standard establishes minimum performance requirements for the control of such hazardous energy - electrical, mechanical, hydraulic, pneumatic, chemical, thermal, and other energy sources.

**2. Application :** This standard applies to the control of energy during servicing and / or maintenance of machines and equipment.

**3. Purpose :** This section requires employers to establish a program and utilize procedures for affixing appropriate lockout devices or tagout devices to energy isolating devices, and to otherwise disable machines or equipment to prevent unexpected energization, start-up or release of stored energy in order to prevent injury to employees.

#### Why is controlling hazardous energy sources important?

Employees servicing or maintaining machines or equipment may be exposed to serious physical harm or death if hazardous energy is not properly controlled. In America itself - Shop floor workers, machine operators, and laborers are among more than 30 million workers who service equipment and face the greatest risk. Compliance with the lockout/ tagout standard prevents an estimated thousands of fatalities and Lacs of injuries each year.

#### How can you protect workers?

The lockout/tagout standard establishes the employer's responsibility to protect employees from hazardous energy sources on machines and equipments during service and maintenance. The standard gives each employer the flexibility to develop an energy control program suited to the needs of the particular workplace and the types of machines and equipment being maintained or serviced. This is generally done by affixing the appropriate lockout or tagout devices to energy-isolating devices and by de-energizing machines and equipment. The standard outlines the steps required to do this.

#### What do employees need to know?

Employees need to be trained to ensure that they know, understand, and follow the applicable provisions of the hazardous energy control procedures. The training must cover at least three areas: aspects of the employer's energy control program; elements of the energy control procedure relevant to the employee's duties or assignment; and the various requirements of the OSHA standards related to lockout/tagout.

## LOCKOUT SAFETY PADLOCK

## OSHA LOCKOUT / TAGOUT REGULATION

- 1910.147(c)(5) OSHA lockout Device requirements state that lockout devices must:
  - Be provided by the employer.
  - Be standardized by size, shape or color.
  - Be distinguishable from locks used for other purposes. Lockout locks should only be used for lockout.
  - Identify the individual who applied the lock (both tags and lock labels are acceptable for this purpose).
  - Be capable of withstanding the usage environment and must be strong enough to prevent removal except by using excessive force with special tools, such as bolt cutters.
  - Most importantly, whenever lockout devices are applied, they must remain under the exclusive control of the individual who attached them. No employee should be able to open a lock attached by someone else.

## KEYING OPTIONS :

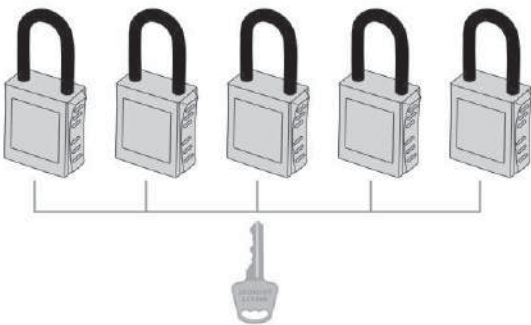

Kindly select the padlocks carefully as per your requirements.

- Shackle Type / Shackle Size / Padlock Body Color
- Same Key** (means all the supplied locks have one common key)
- Key Different** (means that all the supplied locks can be opened with their respective keys only)
- Key Different + Master Key** (means that all the supplied locks can be opened with their respective keys + with one master key)

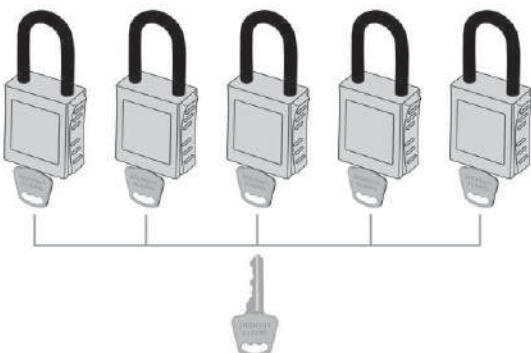

### Key Different (KD)

means that every lock has its individual key and the key for one lock can not open another lock in any case.

### Same Key (SK)

means all locks in a set can be opened with the same key.

### Master Key (MK)

can be used to open multiple locks that are keyed differently.

*If Number of extra keys required.  
They can be supplied against the confirmed order  
and at an extra cost.*

## LOCKOUT HASP

*Safety lockout hasps allow multiple padlocks to be used when isolating one energy source. The lockout hasp is placed through the isolating point and closed. Every person carrying out maintenance or service work attaches and locks in place their own unique individually keyed padlock through the lockout hasp. This ensures each worker's safety as the energy cannot be restored until the work is finished and all padlocks have been removed. **We offer all kind of lockout hasps.***

## CABLE LOCKOUT

*Cable lockouts are ideal for situations where there is a need to lockout multiple energy sources with one device or where the design / placement of the energy sources prevents other types of lockouts from being used.*

*Use the flexible cable to tie off the energy source. The device holds the cable firmly and prevents it from loosening. Several padlocks can be put on the device to ensure the safety of workers.*

*They are flexible, cost-effective, easy-to-use, just as efficient as chains but are much lighter and visible.*

## VALVE LOCKOUT

*Valve lockouts are simple and effective in order to prevent unauthorized operation of valves. Valves come in a huge range of shapes, sizes and methods of operation. Whether you have Ball Valves, Gate Valves, Plug Valves, Globe Valves or Butterfly Valves; their method of operation determine the lockout device for the valve.*

*Several valves are manually operated via a handwheel / lever / wrench or the valve might be power actuated e.g. electric motor, hydraulic or pneumatic actuator. Regardless of the method of operation, all valves can be locked out by our various available lockout solutions.*

## GATE VALVE LOCKOUT

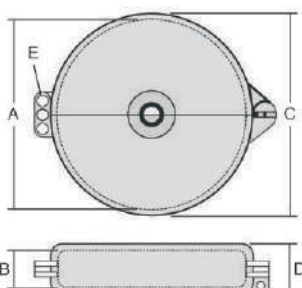

- ⚠ Virtually indestructible valve covers.
- ⚠ Once locked, they rotate freely around the hand wheel & prevent the valve wheel from being turned.
- ⚠ The strong polyurethane plastics make them resistant to cracking and abrasion.
- ⚠ They are resistant to extreme weather and temperature conditions.
- ⚠ Available in 5 sizes ( Red colour ) Other colours are available on request (*minimum quantity applicable*)\*.
- ⚠ Padlock holes are available in each gate valve lockout device.
- ⚠ Withstands temperatures from - 20°F to 200°F.
- ⚠ Unique knockout center accommodates OS & Y or "rising stem" valves.
- ⚠ Hasps and padlocks can be used to lock these lockouts.

## CIRCUIT BREAKER LOCKOUT

*As per OSHA, all energy sources should be turned off and locked out to protect employees from injuries caused by the accidental startup of equipment under repair and service. To aid in complying with OSHA 1910.147, we offer a complete range of high quality, universal Circuit Breaker Lockout Devices to ensure that electrical energy sources are isolated for optimal work place safety. These Circuit Breaker Lockouts are part of an extensive line of innovative safety devices designed by professionals to protect employees from risks associated with hazardous energy, while meeting safety and regulatory requirements.*

## MINI CIRCUIT BREAKER LOCKOUT

- Safe & Effective method for locking out Mini Circuit Breakers.
- Push Button / Slider type Mini CBL - does not require any tool for installation.
- The Tie Bar style lockout has a convenient thumb wheel for quick application on multiple breakers.
- Can be applied on single / multiple breakers.
- A Padlock should be applied on these lockout devices.
- Made of ABS, Nylon body. And pins made of stainless steel.

The first three devices in each range work by engaging wire pins into small holes located on either side of the MCB switch toggle. In order to engage the pins into the holes, they have to be exposed further. On the **Standard Type**, this is achieved by pressing the spring loaded black colour plunger with the thumb. In the **Slider Type** the upper part of CBL is pulled back for releasing the pins & pushed back for locking purpose.

The **Tie Bar** & Mini **CBL** offers a degree of universality. Both can be used on multi-pole breakers which are operated with a tie-bar. Mini **CBL** is fixed to the breaker using a small screw driver.

# ELECTRICAL PANEL LOCKOUT

**TAJLOTO SAFETY PVT. LTD.**  
LOCKOUT TAGOUT MANUFACTURER

## ELECTRICAL PANEL LOCKOUT

- These lockout devices specially designed to lockout electrical panel buttons and switches with no inbuilt lockout provisions.
- Available in various different designs, they all work in a 2-stage operation. The base plate should be attached directly onto the electrical panel over the top of the relevant switch using the super strong adhesive Backing / Riveting / Bolting.
- When in place, the electrical plugs / switches / buttons can be isolated by placing the house unit over the top of base plate - hence preventing the access to the isolated switch. Then, they can be locked in place with a Lockout Padlock.
- The circular units are designed to fit over most of the universal type push panel buttons and the square units are designed for the switches with levers. For the switches with extended handles - we have the special patented lockout solutions that freeze the movement of these switches to a still position where they need to be locked at a specific angle.
- This complete range of products can be cut from any side / direction to suit the installation on different panels.
- Made of Polycarbonate (PC) plastics.

## SCAFFOLDING HOLDERS & TAGS / INSERTS

*This specially designed holder and insert system ensures that all the concerned people are well aware of the current status of the structure. A scaffold should be fitted at all ladder access points from the first build stage and is to remain on the structure until dismantled thereby communicating a safety message to all.*

*By adopting the scaffold, you are demonstrating your duty of care to your workers and that you have done everything reasonably practical to ensure safe access and egress from the place of work as well as giving them as much information required to work safely.*

## SAFETY DATA SHEETS

### TAJLOTO SAFETY

**Information** to do with the properties of hazardous chemicals is provided in Material Safety Data Sheets (MSDSs), also known as Safety Data Sheets (SDSs) or Product Safety Data Sheets. Each SDS should provide comprehensive information about the chemical that allows employers and workers to obtain relevant, and accurate information that can be put in perspective with regard to the hazards, uses, and risk management of the chemical product in the workplace. It contains information about chemical properties, health and physical hazards, first aid and medical treatment, emergency response, and the handling and disposal of chemicals. The SDS should be concise and immediately accessible and usable.
